Test Perspective

Self-service load testing at your fingertips.

Keynote Test Perspective is a cost-effective, completely self-service Web site load testing tool. With Test Perspective you can run the most realistic load tests on-demand and receive immediate feedback on modifications you make to your Web sites.

Working Examples & Practice Server

Your account includes a ready-to-go test site and some pre-recorded scripts. The working examples include descriptions of the features they demonstrate. Download the sample scripts from the [online help](#) and view them with the Test Perspective Recorder.

The Keynote Difference

Dedicated systems on the Keynote Global Network deliver consistent and repeatable load conditions. Keynote never rents capacity on shared infrastructures or relies upon unstable end-user populations.
