Big Data, Serious Games, and the Future

Michael Hugos
CIO at Large
Center for Systems Innovation
Simple abstractions served well when data was scarce, collection was intermittent, and we had lots of time to analyze it.

These abstractions live in two dimensions – X and Y – in Flatland.
but in reality I am not a Circle, but an infinite number of Circles, or Circles, at a time. I move out of the plane of Flatland..."
Cyberspace. A consensual hallucination experienced daily by billions… a
It is always nighttime in the Metaverse, and the Street is always garish and brilliant like Las
Sysco is wide and flat. WW Grainger is tall and narrower—name those shapes.

Grainger has much higher ratio of net tangible assets to total assets.

Sysco has total liabilities four times as large as Grainger and net tangible assets slightly smaller than those of Grainger.
Serious Games

Future of Work
